Description

The ICT MPS Ultra provides up to 12 kW of hot swappable, managed DC power for a broad range of communications and broadband applications. Available for 48, 24 or 12 volt DC applications, MPS Ultra systems are preconfigured at the factory to provide fast, easy installation at the site. Every model includes the ICT Intelligent Control Module to provide full TCP/IP remote monitoring and control of all system functions. A variety of battery management and load distribution combinations are available to suit your requirements.

The Intelligent Control Module provides TCP/IP remote monitoring and control. The Battery Management Module provides a 150 Amp low voltage disconnect, dual 100 Amp battery breakers with advanced sealed lead acid battery functions including battery state of charge, estimated run time remaining, and battery discharge testing. Li-ion battery management systems are supported as well.

Up to three Load Distribution Modules can be ordered for supporting up to 12 load devices. Rated at 25A max. each, every output is capable of monitoring and reporting load current conditions. Remote power control over Ethernet allows for the power-cycling or de-energizing of individual loads without having to visit the site.

The ICT MPS Ultra is designed, manufactured and supported in North America to meet the need for wireless communications, broadband and other critical DC power applications
