

## AC/DC Switch Mode Power Supplies and Rectifiers for Industrial and Telecom Applications

### 60W, 125W and 250 W

- Input voltage 230/115 VAC • Output voltages 12, 24, 36 or 48 VDC • Statistical MTBF >3 000 000 hours
- Built in output series diode • Temperature compensated battery charging • Wide output adjustment range
- Efficiency 82...90% • Operating temperature -40 °C...+70 °C (see derating) • EMC EN55022B (telecom)

#### MULTI PURPOSE APPLICATIONS (EXAMPLES)

(A)

Battery back-up systems  
Temperature compensated charging  
Low voltage disconnect unit

(B)

Special features with external control:

- Boost charging
- Battery test possibility
- Shut down by external 4-15V voltage
- Controllable output voltage

(C)

Redundant n+1 systems with built in series diode and module fail

(D)

Series connection ± Outputs

**\*) y selection code:**

**Standard features:**

All models

1 = Module fail alarm relay + Output over voltage protection (OVP),  
3 = Output series diode + Module fail alarm relay + Output OVP

**Optional features:**

125/250W models  
125/250W rectifiers

0 = Alarm relay + Shut down, 2 = Output series diode + Alarm relay + Shut down, (No OVP)  
4 = Output remote control for battery test + alarm relay + Output OVP,  
5 = Output remote control for battery test + alarm relay + Output OVP + Output series diode

**Letter P models include passive power factor correction coil**

\*\*) Marked model does not comply with EN61000-3-2 harmonics standard.  
These can be used in following applications: the unit is not directly connected to the public mains network, or if the unit is installed in a professional equipment with a total rated power greater than 1kW, or if the input current of the equipment is greater than 16A per phase

\*\*) Marked models are not UL508 listed, 12V/ 20A model max current with series diode 18A

**Marking plate sticker**

## PIN CONFIGURATION 60W MODELS

### INPUT CONNECTOR

- 1: Protective Earth
- 2: N (+ if used at DC network)
- 3: L (- if used at DC network)

### OUTPUT CONNECTOR

- 1: Output -
- 2: Output +
- 3: Not in use (Y selection code 1 or 3) OR Remote control input in shut down models (Y selection code 0 or 2)
- 4,5: Temperature compensation NTC sensor
- 6: Alarm relay, normally closed (relay not energized)
- 7: Alarm relay, normally open (relay not energized)
- 8: Alarm relay, common

Use 60/70 or 75°C copper (CU) wire only. The recommended terminal tightening torque is 0.5Nm.

## PIN CONFIGURATION 125W MODELS

### INPUT CONNECTOR

- 1: Protective Earth
- 2: N
- 3: L

### OUTPUT CONNECTOR

- 1: Output -
- 2: Output +
- 3,4: Temperature compensation NTC sensor
- 5: Alarm relay, normally closed (relay not energized)
- 6: Alarm relay, normally open (relay not energized)
- 7: Alarm relay, common
- 8: Not in use (Y selection code 1 or 3) OR Remote control input in shut down (Y=0 or 2) or battery test models (Y=4 or 5)

Use 60/70 or 75°C copper (CU) wire only. The recommended terminal tightening torque is 0.5Nm.

## PIN CONFIGURATION 250W MODELS

### INPUT CONNECTOR

- 1: Protective Earth
- 2: N
- 3: L

### OUTPUT CONNECTOR

- 1, 2: Output - Note: Rated current 12A / pin
- 3, 4, 5: Output + Note: Rated current 12A / pin
- 6: Temperature compensation NTC sensor
- 7: Alarm relay, normally closed (relay not energized)
- 8: Alarm relay, normally open (relay not energized)
- 9: Alarm relay, common
- 10: Temperature compensation NTC sensor
- 11: Not in use (Y selection code 1 or 3) OR Remote control input, shut down (Y=0 or 2) or battery test (Y=4 or 5) models

Use 60/70 or 75°C copper (CU) wire only. The recommended terminal tightening torque is 0.5Nm.

## DIMENSIONS

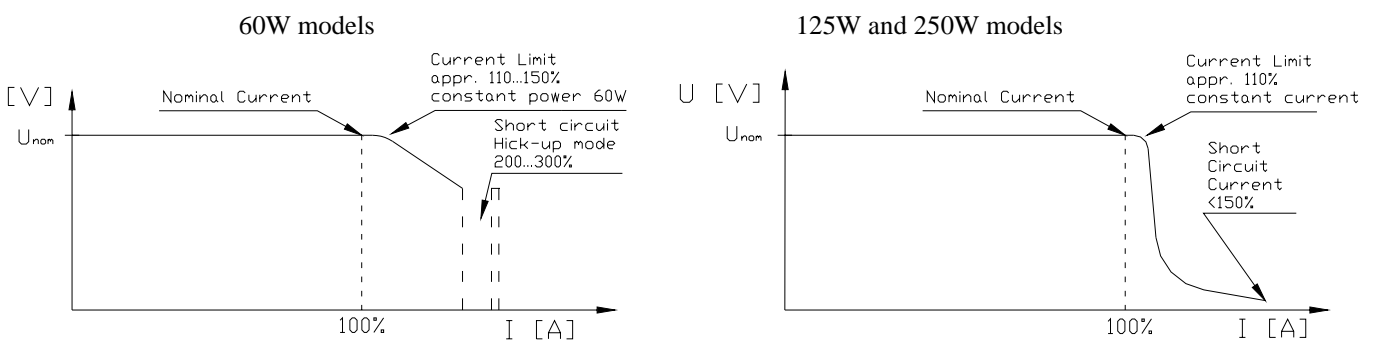

|   | 60W    | 125W   | 250W   |
|---|--------|--------|--------|
| W | 51 mm  | 66 mm  | 75 mm  |
| H | 121 mm | 148 mm | 173 mm |
| D | 81 mm  | 113 mm | 122 mm |

### FREE INSTALLATION CHOICE

Due to movable DIN –rail connectors 5000-series modules can be flexibly installed to the available space

## CURRENT LIMITING CURVES

Please note that curves present the current limiting principle only. Exact values and shape of curves varies between different models, refer specification.

## POWER DERATING CURVES

## TEMPERATURE COMPENSATION EFFECT TO FLOAT CHARGE VOLTAGE

Temperature compensation sensor  
2.2k ohm NTC resistor  
is included in rectifier models (x =7, 8 or 9) delivery

## INTENDED USE

The power supply shall only be installed and put into operation by qualified personnel.

This power supply is designed for building purposes in an enclosure and is intended to be used in industrial and telecom applications. Units can be used as a power supply or for float charging batteries in standby battery back-up solutions. For safety reasons external fuse or circuit breaker must be installed between the rectifier and battery.

R-version units also fulfill demanding environmental requirements like shocks, vibration, humidity and wide ambient temperature range. 250W units without P in the end of type number do not comply with EN61000-3-2 harmonics standard. These units are intended to be used in non-public networks only.

## SAFETY PRECAUTIONS

Do not use the unit without proper earth connection (Protective Earth). Turn power off from AC input wires before working with the power supply. Units are intended to be used as permanently connected equipment (excluding bench models with fixed power cord). Readily accessible disconnection device shall be incorporated in building installation wiring. If unit is used for charging batteries, external fuse or circuit breaker must be installed between the rectifier and battery.

## WARNING!

Dangerous voltages, capable of causing death, are present in this equipment. Do not remove the cover. No operator serviceable parts inside. Refer servicing to qualified service personnel.

## 115/230V INPUT VOLTAGE SELECTION

### 125/250W models:

The unit is factory set to operate with a 230V nominal input voltage. The nominal input voltage can be selected via the internal 115/230 voltage selector on the PCB. Access to the selector is through the ventilation holes of the unit cover. **Always disconnect power before selecting.**

### 60W models:

The unit is wide input type and will work without modification from 90VAC to 264VAC.

## USING UNIT WITH DC INPUT

60W units can be operated also by DC input voltage. See voltage range from specification and connection from pin configuration.

Note ! DC input is not UL60950-1 approved.

## OUTPUT VOLTAGE ADJUSTMENT AND BATTERY CHARGING APPLICATIONS

The output voltage of the module can be adjusted with the multi-turn potentiometer located on the front panel. All models can be used either as a power supply or a standby battery charger by correct adjustment. Please note that the output of the unit **is not reverse voltage protected** and wrong battery polarity will break the unit. So pay attention to the correct polarity.

Note! For safety reasons external fuse or circuit breaker must be installed between the rectifier and battery.

125W and 250W models: Maximum output current is available within the full voltage adjustment range.

60W models: Maximum output power is available within the full voltage adjustment range

## ALARM RELAY

The potential free alarm output indicates if the output of the unit is healthy. Alarm relay contacts, both normally open and normally closed, are presented on the unit connector. If the output is healthy, the NO and COM pins are short circuited. If the unit fails the relay contacts will changeover and NC and COM pins will be short circuited. Word "normal" in relay pins means that mode when relay is not energized.

## SERIES / PARALLEL CONNECTION

Reserve 2cm space on both sides for proper cooling.

Parallel operation: Passive load sharing. Do not chain the outputs, rated current 12A / pin. Recommended cable size: 2.5mm<sup>2</sup>, length > 0.5m for optimum load sharing. External series diodes are needed for parallel connection of 60W models (FET type built in "series diode circuit" does not work properly in parallel connection). 125/250W models can be connected in parallel with or without series diodes. Redundant n+1 system can be made only with series diodes.

Series operation: Up to 500V total voltage.

## TEMPERATURE COMPENSATION

Temperature compensated charging provides the optimum float charge voltage when batteries are being used. To utilize this feature it is necessary to install a NTC sensor across the temperature compensation pins on the output connector. It is also necessary to set the jumper on the front panel to ON position. The output voltage should be adjusted when the jumper is in the OFF position. This will simulate room temperature and ensure accuracy. The recommended sensor type is a 2.2k ohm NTC resistor, e.g. Epcos B57164-K222-K. The sensor should be installed local to the batteries. The sensor is galvanically connected to the + output. Temperature compensation sensor is included in rectifier models (x =7, 8 or 9) delivery

## LED

A green LED indicates that the output of the module is healthy.

## OUTPUT OVERCURRENT PROTECTION

Automatic, self-resetting electronic current limiting is included and the output is short circuit proof.

## OUTPUT OVER VOLTAGE PROTECTION (OPTION)

Output of the unit will shut down if the output voltage rises above protection level. (16Volts/12V models, 31Volts/24V models and 58 Volts/48V models). Protection must be manually resetted by disconnecting the AC mains voltage.

## OUTPUT VOLTAGE REMOTE SHUT DOWN AND BATTERY TEST OPTIONAL MODELS

Output of the unit will shut down, when a +4...15VDC signal is applied to the remote control input (RC) with reference to negative output.

In battery test models output voltage drops 15-25% , when a +4...15VDC signal is applied to the RC pins as above.

The output voltage will return to the original level, when +4...15VDC signal is removed from RC pins.

## INTERNAL OUTPUT SERIES DIODE OPTION (125/250W series diode, 60W FET circuit)

The internal diode is placed in series with the positive output. The benefits of having the diode fitted are:

- Improved redundancy if the modules are connected in parallel (not for 60W models, external series diode needed)
- Power OK signal and LED work independently regardless battery or parallel connections
- The parallel connected modules can be Hot Plug replaced without the system output power interruption (60W models need external series diode)
- The reverse current bleed is low if a battery is connected to the output of the rectifier

The disadvantages of having the diode fitted are lower efficiency, deration to the output voltage regulation and load sharing.

Note: The output series diode does not protect against reverse polarity connection of the battery.
